

# INCIDENTSHARE™ APP

Mobile video streaming brought to the test every day by demanding first responder professionals. The IncidentShare™ app lets you create a robust, mobile video stream with low latency. And it gives you secure viewing of the streams from your colleagues in the field.

## Versatile

Use the IncidentShare™ app to live stream the feed from either of the cameras of your tablet or phone. Or use the IncidentShare™ app to get access to the live streams made by your colleagues. Draw benefit from the abundance of mounts and covers available for your device

## Intuitive and easy to use

Download the IncidentShare™ app from google play store, open the app and type your domain, username and password and you are streaming. To view other streams, simply select one from the list.

## Secure, low latency streaming

The IncidentShare™ app provides streaming with extraordinarily low latency. In combination with the incidentShare™ transcoding platform, you have a secure way of receiving and distributing the video in high quality.

## Optimal coverage

Combine the cellular modem and the wifi antenna of your table or phone to get optimal network reception and resilience. The bandwidth of the available connections are seamlessly aggregated to ensure sufficient capacity. Your streaming will continue even if either of the connections should fail completely.

# The Incendium Secure Streaming Suite for Intelligence, National Security and Law enforcement agencies

## Scenarios

On-the-fly drop-and-deploy situational awareness monitoring in Transportation and subways

HazMat or CBRN(E) teams can be directed by medical specialist or other Subject Matter Experts

Easy-to-use documentation solution for Riot Police on the ground where video can be processed directly to criminal investigation teams

Mobile video surveillance, Special Observation teams with real-time uplink

Tactical video solution for Special units and SWAT teams can benefit from proper real-time reconnaissance videos.

Users can access the streaming video by selecting the appropriate channel on the easy-to-use IncidentShare™ app for any in-vehicle video stream

Enables criminal investigators to leverage the power of live video without the complexities and burdens of conventional technology

DJI integration\*- Transmit securely high quality dual bonded drone footage with low latency.

Available April 2017

### Product Specifications

Video Stream resolution	Up to 1080p60
Video player resolution	Resolution from source is kept
Video inputs	Front and rear camera
Network technologies	3G, 4G, and WiFi. Bonding enabled by default
Audio in/out	Build in , stereo line-in mic and speaker
Compatible devices	Requires Android 4.4 or later
Security	Only valid users can connect via VPN or trusted IP
Encryption	Advanced Encryption Standard (AES) 256-bit
Configuration	Your organisation's IncidentShare™ provides ability to remotely control settings of all connected apps

## About Incendium

INCENDIUM is a Danish end-to-end solution provider for all phases of product development.

We design, develop, and deliver state-of-the-art security and surveillance solutions which are deployed by first responder professionals. Incendium are specialized in advanced systems for real-time video surveillance on mobile 3G/4G cellular network technology. Incendium offers standard and tailor made solutions that accommodate the increasing need for effective security and surveillance.

Our passion for innovation keeps us one step ahead in the rapidly changing and increasingly challenging environments our products perform in. Be it on the streets of our cities, engaging the terror threat or at the world's largest events.
